FORMATIVE EVALUATION 1 • LV125E

CEFR B2 • 20 POINTS

Session 7 Lesson Worksheet: EASA Regulatory Extract & Class Activity

Student teams of up to 4 take the floor to present an official EASA documentation extract, explain its technical meaning, teach new words, and lead creative reading and speaking exercises for classmates.

TRACK & MODULE	SESSION DURATION	DELIVERY FORMAT	CONTINUOUS ASSESSMENT
AT • Module 1 (LV125E)	2 Hours (30-Min Sessions)	Teams of Up to 4 Students	FE1 Graded out of 20

1. Executive Summary & Professional Aviation Relevance

Reading, explaining, and facilitating discussions around official European regulatory documentation is central to the role of civil aviation technical officers (TSEEAC), aerodrome inspectors, and operational managers. Whether briefing airport staff on a new EASA safety directive, guiding ground crews through ramp speed rules, or explaining audit findings, the ability to translate formal regulatory prose into clear, plain B2 English with accurate technical vocabulary transforms passive knowledge into active communicative leadership.

In this session, student groups lead 30-minute interactive workshops, presenting their chosen EASA extract, teaching key vocabulary, and engaging classmates with creative exercises. Imagination and creativity are strongly encouraged! At the end of the student presentations, your teacher will spend the final minutes of class providing constructive feedback and offering spoken language corrections.

2. Four Core Spoken Communicative Objectives (CEFR B2 Level)

OBJ 01 Spoken Breakdown of the EASA Extract
Explain the regulatory domain, core safety issue, and operational meaning in clear, plain English without reading from slides or notes.

OBJ 02 Teach 3 to 5 New Technical Words
Teach key specialized terms from your extract with simple plain English definitions and practical aerodrome examples.

OBJ 03 Lead Creative Classmate Exercises
Engage classmates with reading comprehension questions, mini-quizzes, or pair speaking tasks. Creativity and imagination are encouraged!

OBJ 04 Equal Contribution & Teacher Feedback
Contribute equally across team members and engage actively with teacher feedback and language corrections during the class debrief.

3. Worksheet Structure & Table of Contents

PAGE	CORE LEARNING SECTION	PROFESSIONAL FOCUS & PRACTICAL SPOKEN OUTCOME
Page 1	Cover, Objectives & Index	Course metadata, executive summary, 4 B2 communicative goals, roadmap.
Page 2	Part 1 & 2: Activity Guidelines & Flow	4 core presentation steps + 4-step 30-minute interactive activity roadmap.
Page 3	Presentation Toolkit & Natural Drills	Introducing extracts, teaching vocabulary, setting up exercises + 5 spoken drills.
Page 4	Official 20-Point Marking Rubric	4 evaluation criteria (5 pts each) + 4 CEFR B2 performance standards.
Page 5	Classmate Observation Notes Studio	Active peer listening notes for student groups observing presenting teams.
Page 6	Activity 5: Simple Safety Check	Regulatory communication challenges, operational impacts, and safety controls.
Page 7	Activity 6: Notes & Portfolio Debriefing	Self-reflection, teacher feedback targets, top 10 vocabulary & FE1 sign-off.

Part 1: Activity Guidelines: Leading Your 30-Minute Interactive Session

Review the 4 core steps for leading your 30-minute interactive session with your classmates based on your selected EASA documentation extract:

STEP 1 **Spoken Breakdown of the EASA Extract**

Present your chosen EASA extract clearly. Explain what regulatory domain it covers, what the main safety requirement is, and why it matters in real aerodrome operations. Do not read aloud from slides or notes!

STEP 2 **Teach 3 to 5 New Technical Words**

Highlight 3 to 5 key specialized terms from your extract. Explain what each word means in plain English and give a clear operational example so your classmates can understand and use it immediately.

STEP 3 **Lead Interactive Classmate Exercises**

Distribute or project little exercises for your classmates to complete (reading comprehension questions, a quick true/false quiz, definition matching, or pair discussion). Creativity and imagination are strongly encouraged!

STEP 4 **Classroom Wrap-Up & Teacher Feedback**

Check answers with the class, answer questions, and summarize the key safety takeaway. In the final minutes of class, the teacher delivers constructive feedback and spoken language corrections.

Part 2: Structured 30-Minute Activity Flow (4 Steps)

Maintain a natural, collaborative pace across the four stages of your team's 30-minute delivery:

STEP 1 Context Hook

Extract Breakdown

Introduce your team, present your extract, and explain the core safety issue in plain English.

STEP 2 Vocabulary

New Technical Words

Teach 3 to 5 new technical words with simple definitions and concrete operational examples.

STEP 3 Class Activity

Classmate Exercises

Classmates complete your comprehension questions, quiz, or speaking task in pairs or small groups.

STEP 4 Feedback

Wrap-Up & Teacher Tips

Review answers together. The teacher provides final constructive feedback and language corrections.

6 Recommended EASA Topics Across Module 1

01. OLS & Crane Permits: Obstacle limitation safeguarding under CS-ADR-DSN.

02. Ramp Speed & Safety: SIB 2024-09 vehicle speed limits and Just Culture reporting.

03. Runway Exemptions: Basic Regulation Art. 71, displaced thresholds & works.

04. Airfield Audits: Part-ADR.AR.C.055 Level 1 hazards vs Level 2 non-compliance.

05. Incident Investigation: Multi-source evidence (Swiss Cheese, ATC, METAR logs).

06. Corrective Action Plans: Part-ADR.OR.D.005 CAP milestones & negotiation.

Spoken Presentation Toolkit — Useful Phrases for Presenters

Deploy these practical, natural B2 phrases during your 30-minute delivery to present your extract, teach words, set up exercises, and debrief:

🛬 Introducing the Extract & Context

- "Good morning everyone. Today our team is looking at an extract from EASA Part-ADR regarding..."
- "This regulation specifically applies to aerodrome operators and deals with..."
- "The main purpose of this statutory requirement is to ensure that..."
- "In practical terms, this means that airfield operations must..."

💡 Teaching New Technical Words

- "The first key term we want to teach you today is..."
- "In simple words, this term means..."
- "For example, when an aircraft lands on a wet runway, this word describes..."
- "Can anyone give another example using this word in context?"

✏️ Setting Up Classmate Exercises

- "Now we would like you to look at the short reading exercise on the screen / handout."
- "Please work in pairs with the person next to you to answer questions 1 to 3."
- "You will have a few minutes to read the paragraph and find the two safety hazards."
- "Take a look at the quiz questions and decide whether each statement is True or False."

🎯 Reviewing Answers & Handover

- "Let us check the answers together. Table 2, what did you find for Question 1?"
- "Does anyone have a different answer or interpretation?"
- "That is correct, because under the EASA rule..."
- "Thank you everyone for your active participation! We now hand over to our teacher."

Language Clinic: Natural Presentation & Instruction Drills

Practice transforming stiff or hesitant presentation talk into confident, plain B2 English:

Scenario 1 (Contextual Hook):
❌ *"Our paper is about rules for airports. It is a bit boring and long."*
✅ **Plain B2:** *"Today our team is presenting an extract from EASA SIB 2024-09 on apron safety. This regulation is crucial because ramp vehicle speeding causes over 50 ground collisions every year."*

Scenario 2 (Defining New Technical Terms):
❌ *"The word is 'displaced threshold'. It is in the dictionary."*
✅ **Plain B2:** *"Our first new term is 'displaced threshold'. That means a runway threshold that is not located at the physical beginning of the runway, usually because of temporary construction work."*

Scenario 3 (Setting Up a Classmate Reading Task):
❌ *"Read this and answer the questions if you want."*
✅ **Plain B2:** *"Please look at Exhibit A on your sheet. With your partner, read the short incident notice and answer the two comprehension questions. You have four minutes."*

Scenario 4 (Checking Classmate Answers):
❌ *"Does someone have the answer? Anyone?"*
✅ **Plain B2:** *"Let us see what you found. Table 1, what did your pair conclude: is this non-compliance a Level 1 hazard or a Level 2 finding?"*

Scenario 5 (Concluding Your Presentation):
❌ *"That is all. We are finished."*
✅ **Plain B2:** *"To conclude, this EASA rule reminds us that clear reporting prevents repeat incidents. Thank you for your active participation, and we now hand over to our teacher."*

Official 20-Point Formative Evaluation Marking Rubric

TOTAL: 20 POINTS • 4 CRITERIA (5 PTS EACH)

ASSESSMENT CRITERION	PTS	TEACHER & PEER EXPECTATIONS (CEFR B2 • SPOKEN TECHNICAL ENGLISH)
1. EASA Extract Breakdown & Reading Comprehension	**5**	Clear, well-structured spoken breakdown explaining the regulatory extract and its practical aerodrome purpose in plain B2 English. Zero reading aloud from slides or notes!
2. Teaching Technical Vocabulary & Definitions	**5**	Effective teaching of 3 to 5 new technical words from the extract with accurate plain English definitions and concrete operational examples.
3. Classmate Exercises & Creative Engagement	**5**	Engaging, creative exercises (reading comprehension questions, quiz, matching, or pair discussion) that get classmates actively thinking and talking.
4. Spoken English Fluency, Pronunciation & Team Balance	**5**	Confident spoken English, intelligible pronunciation, natural conversational tone, and equal speaking contribution across all group members.

Four CEFR B2 Performance Bands

Exemplary — 18–20 PTS

Dynamic student presentation; crystal-clear breakdown; excellent vocabulary teaching; highly engaging and creative classmate activity; equal team speaking.

Solid B2 — 14–17 PTS

Good explanation of the extract; clear vocabulary definitions; classmates participate actively in the exercise; minor language slips; good teamwork.

Developing — 10–13 PTS

Overly lecture-based; exercises are rushed or unclear; unequal speaking time among group members; occasional reliance on written notes.

Needs Growth — <10 PTS

Direct reading aloud from notes or slides; no interactive exercise for classmates; extract not explained clearly; lack of preparation.

💡 Session 7 Golden Rules (FE1)

1. Zero Reading Aloud: Speak directly and naturally to classmates. Reading from slides or notes is strictly penalized.

2. Get Classmates Active: Engage peers with reading comprehension, quizzes, or speaking tasks. Creativity is rewarded!

3. Teacher Final Feedback: Listen actively to your teacher's feedback and spoken language corrections to set portfolio goals.

Classmate Observation Notes Studio

While other student groups deliver their 30-minute presentations, record active observation notes below. Your constructive feedback helps your classmates sharpen their professional technical communication:

Group 1 Observation Notes

PRESENTING TEAM 1

1. What was their EASA extract about? (Core regulatory requirement / safety hazard):

2. New Technical Words Learned: (Terms and operational meanings taught):

3. Feedback on their Classmate Exercise: (What was engaging, creative, or challenging?):

Group 2 Observation Notes

PRESENTING TEAM 2

1. What was their EASA extract about? (Core regulatory requirement / safety hazard):

2. New Technical Words Learned: (Terms and operational meanings taught):

3. Feedback on their Classmate Exercise: (What was engaging, creative, or challenging?):

Group 3 Observation Notes

PRESENTING TEAM 3

1. What was their EASA extract about? (Core regulatory requirement / safety hazard):

2. New Technical Words Learned: (Terms and operational meanings taught):

3. Feedback on their Classmate Exercise: (What was engaging, creative, or challenging?):

Active Peer Listening Golden Rules

Participate with 100% engagement during classmate exercises. Active peer participation creates a supportive, high-energy environment for everyone taking the floor.

Activity 5: Simple Safety Check: Clear Communication in Airfield Regulations

Review the 4 questions in the table below to analyze how reading comprehension, technical vocabulary, and plain English explanation protect operational safety on the airfield:

SIMPLE SAFETY QUESTION	AGREED OPERATIONAL ANSWER & TAKEAWAY
1. What is the communication challenge?	EASA regulations and technical aerodrome specifications use dense legal English that can be difficult for operational teams to interpret quickly during frontline airfield operations.
2. What could happen if misunderstood?	Misinterpreting safety requirements leads to non-compliant airfield operations, inadequate risk mitigation, and heightened danger of runway excursions or apron vehicle collisions.
3. How do we fix it?	Civil aviation technical officers must know how to break down complex texts into plain, actionable English, teach key vocabulary, and verify team understanding through interactive discussion.
4. Operational Takeaway	Clear spoken communication and interactive peer engagement turn regulatory rules into everyday safe operational habits across international airport environments.

⚡ Rules to Reality: The 60-Second Regulatory Pitch

UNSCRIPTED SPOKEN WRAP-UP

Without looking at your notes, turn to your partner and explain in 60 seconds: *"Why is reading comprehension and clear spoken explanation a vital safety skill for civil aviation technical officers (TSEEAC)?"*

💡 **Talking Points to Include:** Mention translating dense EASA regulations into plain language, preventing repeat safety incidents, and fostering clear communication across multinational airline and ground crews.

Activity 6: Presentation Reflections & Teacher Feedback

Log your personal lesson delivery reflections, teacher feedback targets, and key vocabulary directly into your learning portfolio:

1. Team Presentation Self-Evaluation

What went well during your 30-minute session? How clearly did you break down your EASA extract? How well did classmates engage with your exercises?

2. Teacher Feedback & Language Corrections

Record key feedback points delivered by your teacher at the end of class: Spoken technical fluency highlights, pronunciation targets, and specific goals for Module 2:

Top 10 Module 1 Airfield Vocabulary in Action

- **Obstacle Limitation Surface (OLS):** Airspace safeguarding slope.
- **Article 71 Exemption:** Temporary urgent safety derogation.
- **Swiss Cheese Model:** Latent conditions lining up to incident.
- **Just Culture:** Non-punitive safety occurrence reporting.
- **CFME Friction Decays:** Continuous mu deceleration trace.
- **Safety Information Bulletin (SIB):** Advisory safety alert.
- **Level 1 Finding:** Immediate airside operational hazard.
- **Corrective Action Plan (CAP):** Binding remediation milestone.
- **NOTAM:** Notice to Airmen alerting of active airside hazards.
- **Displaced Threshold:** Runway landing start moved for works.
